Spectrum 5010 is a versatile and high-performance sunscreening fabric. A range of options ensure that there is a perfect solution for every situation.

Available in 4 different openness factors, you can tailor the amount of light you let in according to the needs of each space whilst maintaining good outward views. All colours are available across each openness factor which allows you to mix different levels of shading within a building, for example on different elevations, whilst maintaining a uniform appearance.

This fabric is certified to international standards for fire retardancy and to Oeko-Tex and Greenguard standards for harmful substances and indoor air quality. It is also infused with anti-microbial protections.

This fabric is available in:

1% 3% **5%** 10%
