

SHADING SOLUTIONS BY DESIGN

Obscura[®] 32, 38, 50, 60 & 80 gravity drop systems

32, 38, 50, 60 & 80 gravity drop systems

OVERVIEW

- Used for blinds up to 3.5m wide, 5m long or 15m²
- Can be installed on vertical or sloped windows
- Manual or motorised rollers

SYSTEM DETAILS

SHY Obscura® gravity drop blinds can operate up to 30° from vertical, with steel wires being used to guide the hem bar if the shade isn't completely upright. (For blinds over this, please see our Obscura® CTS rooflight system).

Quick-fix, high strength brackets are sized to match the tube diameter.

Operation can be manual or motorised. Having fixings for virtually any situation, and clever features like counter-balancing springs, makes it easy to raise and lower an Obscura® roller blind.

APPLICATION

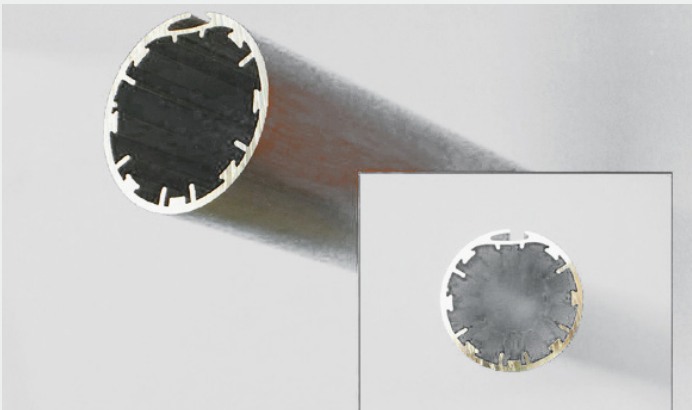

Ideal for both commercial and high-end domestic situations. Neat and stylish, Obscura® gravity blinds can be used for multiple applications including glare and heat control, room and space dividers, projection screens in offices and home cinemas. Utilising a wide choice of blind fabrics.

Hardware can be powder coated to any RAL colour (standard colours are white & black) to suit existing surroundings.

Obscura® Features

TUBES

- Tube sizes are 32, 38, 50, 60 & 80
- Choice of tube depends on the size of the blind, with larger blinds requiring a larger tube
- 110 & 160mm diameter tubes are also available for larger systems – see Obscura® 110 & 160 systems literature

FABRIC

- Blackout – prevents or significantly reduces the amount of light passing through the fabric
- Glass fibre and polyester screen – protect against heat and glare of the sun

MANUAL CONTROL

- Chain (size dependent)
- Crank handle (size dependent)

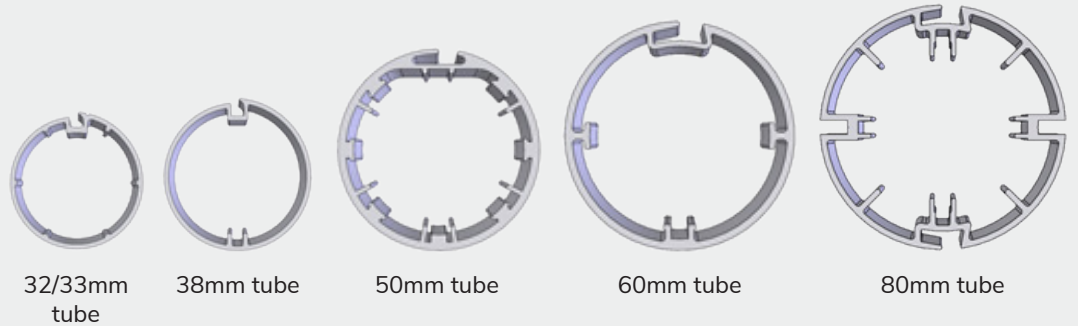

MOTORISED CONTROL

- Radio control – remote or switch
- Hard wired – switch or integration into control systems
- Battery powered
